

AMCMA's Integrated Veterinary Pain Management Center offers many great therapeutic and preventative options for your pet, including:

- **Weight Loss and Conditioning Programs.**

An exercise regimen that is fun for your dog! Nutritional consultation, exercise plans, and staff-support can help your pet lose weight safely, get in shape, and stay in shape.

- **Senior Dog Care.** Chronic conditions such as osteoarthritis and myelopathy can affect senior dogs. Pain management includes both pharmaceutical and non-pharmaceutical options and can provide relief as well as help your dog with general physical fitness.

- **Post-Operative Rehabilitation.** We can help rebuild your pet's strength, muscle mass, coordination, and confidence so they may return them to their daily lives and activities much faster and stronger than ever.

- **General Fitness and Conditioning.** Whether you are unable to exercise your pet in the heat or cold, or if you are looking for something fun and healthy for your active dog to enjoy, we can provide fitness and conditioning programs that give your dog well-rounded physical exercise and strength while burning off excess energy.

Any questions about what we offer? Have specific needs for your pet's condition? Please feel free to call us for more details!

Integrated Veterinary Pain Management Center

One of the few veterinary hospitals of its kind in the United States, Animal Medical Center of Mid-America

combines multiple approaches to treating pain. Supplements, medications, and state-of-the-art equipment can greatly reduce pain and improve a pet's quality of life. Exams are

focused on finding where pain is affecting patients, then therapy can be focused on specific areas of the body.

Specialized diagnostic equipment, including Stance Analyzer and Infrared Camera, when used in conjunction with traditional diagnostic tools, improves the detection of pain. The white in this image shows significant inflammation in the dog's hind leg and allows us to develop the best course of treatment.

Our Integrated Veterinary Pain Management Center at AMCMA's Maryland Heights location offers:

- **Underwater Treadmill.** Utilizing the therapeutic properties of water, this is a safe method for rehabilitation after injury and improving body condition.
- **Rehabilitation.** Therapist-assisted and condition-specific exercises can improve limb use, balance, and strength, as well as manual therapy including range of motion, stretching, and massage.
- **Platelet Rich Plasma Therapy.** A patient's own blood cells are processed and injected back into the specific joints where arthritis is occurring. The high concentration of growth factors and healing proteins helps reverse the joint damage and aids the body in restoring healthy joint tissue.
- **Class IV Laser Therapy.** Laser therapy targets specific body areas to relieve pain and inflammation, stimulate tissue regeneration, and helps the body release endorphins to fight pain naturally.
- **Nutrition Counselling.** Obesity is the number one pet health problem encountered today. Not only does extra weight stress joints and ligaments, but fat tissue promotes inflammatory conditions inside the pet's body.

- **Chiropractic Care.** A pet experiencing pain from an injury or condition may benefit from adjustments that target specific areas of the body. These adjustments can help the nervous system to function better, allowing the body to heal.
